WEBSITE DESIGN
SOPHIA CONDON 5.1

TASK

3

Input	Process	Output	Actual Output
1) User enters correct Login details	Validation of user input	Account made, brings user to 'gallery' page	Rejection, User sees gallery page before entering login details
2) User enters incorrect Login details	Rejection of user input	Account access denied, user has to re enter details	Account access denied, user has to re enter details
3) User clicks an image from the 'gallery'	Art work is loading	User sees an image of the artist along with text	Valid
4) User clicks an art work on the right	Art Work is loading	User sees artwork blown up with text	Rejected, only text and one image, too complicated with my skills to add several images.
5) User clicks another art work from right of artist page	Art work is loading	User sees artwork blown up with text	Valid
6) User clicks 'Gallery' at top right of nav bar	Page changes	User is back at 'gallery' page	Valid
7) User clicks an image from the 'gallery'	Art work is loading	User sees an image of the artist along with text	Valid
8) User clicks 'About'	About' page loads	User Learns about creators of website, contact info, location and concept of website.	Rejection, this is where user can subscribe to mailing list.

TASK

3

To validate my code, I used *Validator.w3.org*. I uploaded each html file separately and went through each error. Each time I changed one part I would save it on VSC and refresh the page on chrome. Though time consuming I was able to correct my errors.

However, for my style sheet I had several errors. I used the website *jigsaw.w3.org*, it told me what parts were incorrect, but I was unsure how to change them.

Overall, I am happy with my website. This is my first time using VSC and although my website appearance is basic, I've learned so much... If I was to do this project all over again, I would try to replicate the screens as close as possible to my original design made on adobe illustrator.
